

SIGNAL LINE CONNECTOR

ABSTRACT OF THE DISCLOSURE

A signal line connector includes a locknut, a hollow cylindrical casing, the casing having a coupling neck mounted with a gasket ring and fitted into the locknut, a locating barrel fitted into the other end of the casing, the locating barrel having an inside annular flange, and a center holding down tube mounted in the casing and secured to the locknut by the casing, the center holding down tube having a barbed portion facing the inside annular flange of the center holding down tube and adapted to hold down the tubular outer conductor and outer insulative layer of a signal line against the inside wall of the locating barrel, keeping the center conductor of the signal line axially suspended in the locknut.
